

In English this week, we finished and edited our quest stories. Next week, we will begin our new unit which will focus on diary writing. Perhaps you wrote a diary as a child and could share this experience with your child? You may have old family diaries which you could discuss.

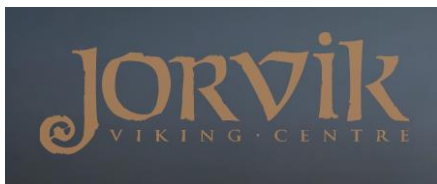

In Maths, we continued to solve a range of subtraction problems using the column subtraction method with and without exchanging. We will be revisiting and applying both the column addition and subtraction methods in our Maths lessons on a weekly basis, however, if this is something your child would like to practise at home, there are videos which will support this in the Maths section on the school website.

In Geography, we began the week by identifying the famous Rocky Mountain Range and the Mississippi River on a map. Then, we researched the climate and human and physical features in Switzerland. Next week, we will research Mexico before comparing the similarities and differences between the two countries.

We had a fantastic time on our school trip to York on Thursday. All the children represented the school fabulously and had an exciting, interactive day which rounded off our 'Vikings' history unit superbly.

Miss Stephenson and Miss Parker 😊
